## NEW YORK CITY

After the success of Nusr-Et Las Vegas, VISO worked with TPG Architecture once again to design-engineer a custom lighting package for Head Chef Nusret Gökçe's New York restaurant location.

Located within the transformed Meatpacking District, TPG drew inspiration from the area. Consequently, VISO fabricated an illuminated pendant track that spans across 72 feet above the dining space. This resulted in creating an organic structure and flow of light. Moreover, this symbolizes the efficiency that's often found in a well-run assembly line.

**DESIGNER:** TPG Architecture  
**PHOTOGRAPHER:** Alex Staniloff

The continuous metal track is retrofitted into the space, moving around the existing ventilations, pipes, and ceiling. This modern installation fits right at home within Nusr-Et Fabrika and draws inspiration from the famous New York subway lines. In addition, this unique track lights up the ceiling through 743 linear feet of uplighting modules and suspends pendant light orbs that are staggered at different heights for additional illumination.

### SPECIFICATION

The feature installation spans 875.5"/22237mm in length and 580.8"/14752mm wide. The pendants drop at variable heights of 19", 25", 32", and 38".

LAS VEGAS + NEW YORK CITY

DESIGN-ENGINEERING & FABRICATION

## LAS VEGAS

Located next to T-Mobile Arena, this luxury restaurant required unique lighting solutions for the best dining environment for guests looking to get a VIP experience.

In keeping with the lively, glitzy demeanor that is Las Vegas, VISO collaborated closely with TPG to provide a space that embraces grandeur and the aura of the surrounding nightlife.

**DESIGNER:** TPG Architecture

**PHOTOGRAPHER:** Brandee Perea, Marc Graham

A tremendous art structure that is installed into the center of the bar area, spans between two floors standing at 558"/14173mm tall. This custom light structure doubles in function as it also houses the glassware and presents videos on the LED screen panels. Designed as the main attraction, this remarkable column creates a gleaming bar area with four fluted acrylic rings, two LED display screen rings, and a ceiling transparent LED display screen. The magnificent centerpiece supports over 600 glass globes that gracefully cascade down.

### SPECIFICATION

This center structure stands at 558"/14173mm tall and is 240"/6096mm in diameter. The alternating glass globes vary from 3.25" and 4.5" in diameter.

This custom pendant design is a deviation of our popular Gemma collection. Therefore, this solution allowed for a quick turn-around time while maintaining a custom aspect. Made out of a solid crystal body, the multifaceted surface picks up light and creates a shimmering effect with the addition of smaller crystal accents along the cable.

### SPECIFICATION

The crystal shade is 4"/100mm in diameter and 4"/100mm in height.
